# KOGIT Role Analytics Plugin for SailPoint IdentityIQ

The KOGIT Role Analytics Plugin was originally developed upon request from customers for an intuitive user navigation in SailPoint IdentityIQ.

This plugin provides a very user-friendly way of finding and viewing identities, roles and entitlements and their relationships. It offers the user a simple tool to zoom in and out of details and click through daily tasks without having to conduct a new search for every task.
The search and view function is completed by a Role
Dashboard highlighting critical KPIs of role and
entitlement status and usage.

- Export option

- Viewing tool for roles, identities and entitlements in IIQ

- Representation of use and assignment of individual objects such as role composition

- Dashboard with metrics for using Entitlements & Roles in IdentityIQ

- Easy navigation between objects and relations

The Plugin provides visibility for the object types "identity", "role" and "entitlement". They each offer a Wildcard search, additional information on linked objects, Drill-down options and Export options.
